

ISLEBJERG CHURCH

ISLEBJERG CHURCH, FREDERIKSSUND, DENMARK

Around the artistic and architectural altar area and pulpit, Sahl Architects has created a sculptural lighting arrangement that elegantly and discreetly “frames” these two important elements of the church.

The combination of matte-brushed and polished brass with mounted crown bulbs creates a visual continuation between the placement of the altar and the pulpit, connecting these two elements through lighting. At the same time, it brings a sense of calm to the light-artistic altarpiece without interfering with it in any way.

Product: ALTAR LIGHTING - CUSTOM DESIGN

Material & finish: Polished and matt brass.

Light sources: Crown bulbs, clear, 230 V. Socket/holder: E14. Wattage: 40 W.

Suspension: Wire suspension.
