

BEAM FIXTURE

BEAM FIXTURE

The Beam fixture is a lighting system, which is adjusted individually to ensure that the lighting level below the gallery is optimum. It is a very discreet lighting solution in which the fixtures are placed between the beams as close to the gallery ceiling as possible. This means, that the often low ceiling below the gallery is not reduced further by dropping lighting fixtures.

Material & finish: Polished and lacquered brass.

Light sources: Max 60 W. E14 230 V.

Safety classifications: II.

Ingress protection: IP20.

Approval: CE

Remark: The lighting system is adjusted individually.
