

THYBORØN CHURCH

THYBORØN CHURCH, THYBORØN, DENMARK

A modern, minimalist parish church made of white concrete, stainless steel, and copper is ready to withstand the wind and salt in Thyborøn.

[The architectural firm Vilsbøll & Poulsen Arkitekter](#) from Lemvig designed and oversaw the construction of the new parish church.

To illuminate the chancel area and flank the altarpiece, Vilsbøll & Poulsen, in collaboration with Okholm Lighting, specially designed two chandeliers made of brass. The chandeliers consist of a central stem and arms in three different lengths.

Okholm Lighting also supplied and installed remote-controlled hoists for the chandeliers.
