

AABENRAA WALL

### AABENRAA WALL

The AABENRAA WALL is a wall-mounted luminaire with an open design that, due to its simplicity, adapts seamlessly to all types of architecture. Its pleasant yet effective light distribution makes it suitable for facades in pedestrian streets, city centers, and corporate environments.

Designed by Ole Weile, the AABENRAA WALL was created with the vision of a glare-free and decorative luminaire, both when illuminated and when switched off. This is achieved by placing the light source at the base, directing the light upward into the top reflector, which ensures uniform distribution. The white reflector softens the light and creates a radially symmetric light distribution with very low discomfort glare.

Additionally, the emitted light illuminates the surrounding area while also providing a soft and decorative glow on the mounting surface.

Together with the two other luminaires in this design family, it enables a cohesive lighting solution with a unified design language, ideal for city centers, plazas, hotels, and corporate buildings.

Following the same design philosophy and lighting concept, Ole Weile has also created AABENRAA LUMINAIRE and AABENRAA BOLLARD.

**Produkt:** AABENRAA WALL

**Material & finish:** Cast aluminium, powder coated anthracite (C6),

**Dimension:** Ø68 cm top shade. Overhang: 55.6 cm.

**Light sources:** 30 W, 4000K, 230 V. PC cover around the LED light source.

**Lysteknik:** The luminaire emits a radially symmetric, downward-directed light. The design of the top shade, combined with the angle of the diffuser, ensures a wide-beam, glare-free, and uniform illumination.

**Safety classifications:** II.

**Approval:** CE

**Design:** Ole Weile. Photo: Henning Rossen
