

LANDESHAUS KIEL

LANDESHAUS KIEL, KIEL, GERMANY

The meeting rooms in Landeshaus Kiel were last modernized 30 years ago and they therefore need a new modernization. The existing lighting has been restored and renewed. In one of the meeting rooms, an LED ring has been suspended and in the other room two linear LED luminaires have been suspended.

The luminaires consist of aluminum profiles. Upper and lower acrylic shields ensure direct and indirect light. The prismatic acrylic shield on the underside ensures glare-free light.
