

ECCO CONFERENCE CENTER

ECCO CONFERENCE CENTER, TØNDER, DENMARK

ECCO, a global brand in the footwear industry, has from the outset placed great emphasis on architecture and sustainable values. This commitment to quality and innovation is likewise reflected in the lighting at the [ECCO Conference Center](#), developed in close collaboration with Okholm Lighting, [DISSING+WEITLING](#), ECCO's in-house designers, lead consultants, and engineers.

The lighting is thoughtfully planned and seamlessly integrated as an essential element of the overall visitor experience. Unique architectural details converge with a holistic approach, in which each component aligns innovatively on both an artisanal and technological level. From the beginning, energy-saving solutions were incorporated, underscoring a sustainable mindset and highlighting ECCO's core values.

The result is a comprehensive experience of the highest quality, where the attention to detail is unparalleled. Okholm Lighting has supplied both functional and decorative solutions to the project, including the striking [Armillar chandelier](#), designed by architect Erik Lassen. This luminous work of art adds a touch of elegance and a distinctive design, further elevating the visitor experience.

Okholm Lighting describes the project in three words: detail – custom design – lighting quality.

Produkt: Lighting concept and products for the majority of the conference center.

Design: Dissing + Weitling architecture
